

AURA Intelligence Terminal

Project Goal

Build a premium analytics platform for the BULK AURA pre-deposit campaign.

The platform should provide insights that are not available in the official BULK interface.

This is NOT a crypto dashboard.

This is an institutional-grade analytics terminal inspired by:

- Bloomberg Terminal
- Dune Analytics
- DefiLlama
- Hyperliquid Analytics
- Financial Times

The experience should feel premium, minimal, elegant and information-dense.

No authentication.

No wallet connection.

Public analytics only.

Brand System

Follow official BULK Brand Guidelines.

Core concepts:

- North Star
- Guidance
- Trust
- Trade
- Financial Intelligence
- Cosmic Noir

The dashboard should look like an official BULK analytics product.

Visual Design

Dark Mode Only (MVP)

Colors:

```
--bulk-base: #141310;  
--bg-primary: #1B1A14;  
--bg-secondary: #544A4C;  
  
--text-primary: #FFFEED;  
--text-secondary: #C6B6BA;  
  
--accent: #FFB547;  
  
--bid-green: #00B481;  
--ask-red: #EF4A3C;
```

Use these colors consistently.

No bright crypto gradients.

No purple neon.

No casino aesthetics.

Typography

Headlines:

IBM Plex Sans

Body/UI:

IBM Plex Sans

Numbers:

IBM Plex Mono

Use tabular numbers wherever possible.

Technology Stack

Frontend

Next.js 15

TypeScript

TailwindCSS

shadcn/ui

Lucide Icons

Recharts

Framer Motion

Data Layer

Node.js

Next.js Route Handlers

JSON snapshots

No database required for MVP.

Deployment

GitHub

Vercel

Project Structure

/app

/page.tsx

/api

/dashboard

/wallet

/leaderboard

/calculator

/components

/charts

/cards

/layout

/lookup

/tables

/lib

/fetcher.ts

Data Sources

Leaderboard:

GET

`https://early.bulk.trade/api/aura/v1/aura/predeposit/leaderboard?page={page}&page_size={page_size}`

Wallet:

GET

`https://early.bulk.trade/api/aura/v1/aura/wallet/{wallet}`

Data Synchronization

Create a scheduled update process.

Every 5 minutes:

1. Download entire leaderboard
2. Merge all pages
3. Save leaderboard.json
4. Recalculate analytics
5. Save aggregated metrics

Expected size:

~51,000 rows

Use:

`page_size=1000`

Determine total pages dynamically.

Homepage Layout

The homepage is a single analytics terminal.

Desktop first.

Responsive on mobile.

HERO SECTION

Title:

AURA Intelligence

Subtitle:

Real-time analytics for the BULK AURA pre-deposit campaign.

Show:

- Total Wallets
- Current TVL
- Total Deposited
- Total Withdrawn
- Total Aura
- Qualified Referrals

Display as six metric cards.

TVL ANALYTICS

Metrics:

Current TVL

Total Deposited

Total Withdrawn

Formulas:

Current TVL = $\text{sum}(\text{current_amount})$

Total Deposited = $\text{sum}(\text{deposited_amount})$

Total Withdrawn = $\text{sum}(\text{withdrawn_amount})$

Store historical snapshots.

Snapshot schema:

{ timestamp, tvl, totalAura, wallets }

Create line chart:

- 24H
- 7D
- 30D
- ALL

AURA DISTRIBUTION

Build histogram.

PERFORMANCE

Cache API responses.

Avoid refetching wallet endpoint repeatedly.

Use ISR.

Target Lighthouse:

90+

Mobile

Collapse sections into stacked cards.

Wallet Lookup remains visible above fold.

Charts should remain interactive.

Public API

Deliverables

1. Fully functional Next.js application
2. Responsive design
3. Real data integration
4. Historical snapshots
5. Production-ready code
6. TypeScript everywhere
7. Clean architecture
8. Ready for Vercel deployment
